DETAILED ACTION

Claim Rejections - 35 USC § 103

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claims 1-13 are rejected under 35 U.S.C. 103(a) as being unpatentable over Prior Art fig.1 of the present application in view of Finn et al. (6,519,464).

Regarding claims 1-13, Prior Art of present application fig.1, discloses a base station communication device including a carrier wave-based transmitter wherein carrier wave communications are carried out in a forward channel from said base station communication device to said mobile communication device (see fig.1, elements 105, 106) and a mobile communication device including a carrier wave-based receiver (see fig.1, elements 115, 116), except for base station including an ultrawideband receiver and mobile including an ultrawideband transmitter. However, Finn et al. disclose mobile communication system and method utilizing impulse radio comprising a base station communication device including an ultrawideband receiver (see fig.10, elements 1016, 1018 and its description); and a mobile communication device including an ultrawideband transmitter wherein ultrawide band communications are carried out in a reverse channel from said mobile device to said base station communication device (see fig.10, element 1030, 1032, and its description). Thus, it would have been obvious to one having ordinary skill in the art at the time the invention was made to use Finn's

impulse radio technique in Prior Art fig.1 in order to utilize very low power transmission in telecommunication system.
